

## Sampled Sounds

Sounds can also be recorded by the computer's microphone and played back in *TuneScope*. The sound recorder is accessed through the *Sounds* tab to the right of the *Scripts* tab.

Once a sound has been recorded, it can be assigned any name that is appropriate. In this instance, a ringing sound was created by tapping a fork on a water glass.

Once a sound has been recorded, it can be accessed through a drop-down menu in the **Play Sound** code block. This code block, in turn, can be assigned to any key on the computer keyboard.
