

Creating a Piano Keyboard Overlay

The **Add Note** code block can be used to assign notes to keys on the computer keyboard. A piano keyboard template (shown in the illustration below) can be used to identify keys on the computer keyboard that correspond to musical notes.

In this piano keyboard template, the number key “1” corresponds to the musical note “C” on the piano keyboard, the number key “2” corresponds to the musical note “C#” on the piano keyboard, the number key “3” corresponds to the musical note “D” on the computer keyboard, and so forth.

The assignment of musical notes to keys on the computer keyboard makes it possible to add new notes to the list by pressing keys on the computer keyboard. There are other possible layouts that could be created depending on the individual needs of each user. For example, the musical note “C” could be assigned to the letter “C” on the computer keyboard. The ability to customize code blocks gives users complete flexibility to customize code blocks in ways that reflect individual preferences.
